
1. Executive summary

Google Workspace MCP is an internal and customer-installable Model Context Protocol (MCP) server operated by BrandMatchCo Inc under the BrandMatchGrowth product brand. It lets authorized users operate Gmail, Google Calendar, Google Tasks, Google Analytics (GA4), and a limited, spend-safe subset of Google Ads from AI assistants such as Cursor.

The Google Ads portion is not a full-service campaign management UI for third-party agencies. It is a specialized automation bridge used by BrandMatchCo Inc (and self-hosted installers) to:

- Discover accessible Google Ads customers

- Report on

BrandMatchCo Inc is applying for Basic Access so production Google Ads accounts owned or managed by BrandMatchCo Inc (and accounts that authorized users explicitly connect via OAuth) can be read and mutated under the controls described below. Expected daily API volume is well under the Basic Access 15,000 operations/day threshold.

2. Company and product

6. Spend-safety and compliance controls

These controls are product requirements, not optional tips:

- Mutating Ads tools default dryRun=true; no write until an explicit dryRun=false after human review.

- All campa

7. Required Minimum Functionality (RMF)

This tool is a specialized, limited-function Ads automation bridge (paused draft creation + reporting), not a full-service third-party Google Ads management console.

BrandMatchCo Inc is applying for Basic Access (under 15,000 operations per day), which is exempt from RMF for tools that remain within Basic Access volume.

If Google classifies the tool as requiring RMF for Standard Access later, BrandMatchCo Inc will either:

(a) implement applicable RMF before requesting Standard Access, or

(b) keep th

12. Summary for reviewers

Google Workspace MCP by BrandMatchCo Inc (BrandMatchGrowth) is a spend-safe Google Ads API client embedded in an MCP server. It authenticates via user OAuth, uses a company developer token, defaults all mutates to dry-run, creates only PAUSED entities, caps daily budgets, and gates ENABLE behind explicit dual confirmation plus verified conversion measurement.

BrandMatchCo Inc requests Basic Access with Ad creation / management and reporting permissible use for production accounts we own or that users authorize.
